Construction Solutions for Power & Industry
Master Builders Solutions is a leading supplier to power and industrial construction, rehabilitation and upgrade projects – coal and gas, nuclear, hydro and wind – as well as all types of industry, including chemical, petroleum and gas refining, processing and distribution.

Whether the need is grout for support and alignment of precision equipment, repair or strengthening of concrete, control and prevention of deterioration due to corrosion, heavy service flooring, waterproofing or large scale concrete placement in new construction or repair applications, the Master Builders Solutions experts and products support the industry’s requirements cost effectively, reliably and sustainably. Because downtime is critical in shutdown applications, Master Builders Solutions offers a full range of products that enable fast return to service, without sacrificing performance. Master Builders Solutions is available globally, and we work to ensure that you will have local support, regardless of project location. An organized, dedicated, networked team of professionals make it easy to find solutions on every continent.
Master Builders Solutions – More than a Century of Experience

Our modern world has ever increasing energy demands. For more than a century, Master Builders Solutions has served the needs of owners, developers, designers and contractors involved with power and industrial projects.

- Concrete repairs to reduce maintenance downtime
- Corrosion control to extend the service life of reinforced concrete
- Durable grouts under extreme loads supporting valuable equipment
- Chemical and abrasion resistant finishes for maintenance free flooring
- Protective coating systems for secondary containment areas
- Strengthening and crack injection solutions to reinstate structural integrity
- Waterproofing to maintain water quality and reduce water loss
- Admixture solutions to improve workability and enhance durability of reinforced concrete
Corrosion control to extend the service life of reinforced concrete

Over time, aggressive environmental influences result in deterioration and corrosion of reinforcing steel. This compromises the durability and negatively affects the service life of structures and buildings in power and industrial facilities. Technologies from Master Builders Solutions are available to protect concrete, and prevent corrosion of the reinforcing steel in these harsh environments. Understanding the corrosion process and addressing the fundamental cause of the deterioration is key to providing a long-term solution.

Solutions for

Pile encapsulation

MasterBrace

A system consisting of a marine grade FRP jacket combined with a highly flowable epoxy grout provides a long lasting protective encapsulation of concrete, steel and wooden piles. The MasterBrace Advanced Pile Encapsulation System prevents ingress of waterborne chlorides and other contaminants and reduces the available oxygen at the surface which effectively provides a reduction in the corrosion potential in the reinforcing steel and protects steel and wooden elements.

Protective treatments

MasterProtect

The MasterProtect system offers a complete range of concrete protection products, including liquid, surface applied migrating corrosion-inhibitors, embedded galvanic anodes, latex and epoxy-modified anti-corrosion coatings for rebar, as well water repellents, protective coatings. The Master Builders Solutions experts connect with customers to identify the best products to use for extending concrete life, and restoring original aesthetics and design function.

Concrete repair and protection to reduce maintenance downtime

Master Builders Solutions experts work collaboratively with owners, designers and contractors to complete durable, high quality concrete repairs of structures and infrastructure in power and industrial facilities. Diagnosing the underlying cause of deterioration and developing a clear repair strategy ensures the right products are used to gain long term structural integrity. Our comprehensive product systems include solutions for surface and structural and surface repair, strengthening, crack repair and sealing, bonding and coating.

Solutions for

**Structural and surface repair**

**MasterEmaco**

A full complement of cementitious and epoxy modified products are available to meet the unique demands of power plants and industrial repair. Formulated to be wet or dry spray applied, formed or hand troweled, the **MasterEmaco** line of products ensures long term durability in vertical, horizontal and overhead installations, and provides additional features such as fast return to service, temperature tolerance (both high and low), fiber reinforcement and corrosion inhibition.

**Concrete protection**

**MasterProtect**

With **MasterProtect** system offers a complete range of concrete protection products, including liquid, surface applied migrating corrosion-inhibitors, water-repellents, special corrosion protective measures as well as anti-carbonation coatings. Master Builders Solutions experts connect with customers to identify the best products to use for extending concrete life, and restoring original aesthetics and design function.

Structural strengthening and crack repair to extend structures' service life

Over time, corrosion attack and aggressive environmental influences can compromise the durability and negatively affect the service life of concrete in power and industrial facilities. Technologies from Master Builders Solutions are available to repair, protect, and strengthen concrete in these harsh environments for both new construction and refurbishment projects.

Solutions for

Crack repair

MasterInject

Where the structural integrity of concrete has been compromised, epoxy adhesives, injection resins and bonding agents fill and seal cracks and voids that have occurred from corrosion or damage during seismic activity and physical impact. The epoxy- and polyurethane-based MasterInject products are easily injected into the crack to penetrate the structure, filling the cracks to re-establish the load bearing capacity and structural integrity. Various formulations meet specific performance criteria.

Concrete strengthening

MasterBrace

The MasterBrace composite strengthening system is a proven method to restore capacity of concrete structure loss due to deterioration, upgrade load bearing capacities, correct design deficits, and for seismic retrofit.

This innovative fiber-reinforced polymer composite system is supported by Master Builders Solutions experts who provide specification and design assistance, contractor training and on-site testing.

Precision grouting to support valuable equipment under extreme loads

Master Builders Solutions full range of precision cementitious and epoxy grouts, including high early strength formulations, are used as the vital link between critical equipment and the foundation, providing total bearing and dynamic load transfer and resistance to maintain alignment even under severe impact, torque and vibrational loads.

Formulated to meet the most demanding requirements, Master Builders Solutions grout products provide stable volume, ease of placement, high strength, controlled set times, as well as chemical, sulfate and high temperature resistance. Master Builders Solutions for grouting are used in many different applications in power and industry, including:

- Turbines, Generators and Compressors
- Pumps, Motors and Fan Housings
- Tank Bases
- Conveyer Supports
- Coal Pulverizers
- Paper Machinery
- Structural Elements and Precast Panels

MasterFlow

The MasterFlow product line includes precision cementitious and epoxy grouts that are specifically engineered to provide a stable foundation for critical equipment. The Master Builders Solutions brand draws on more than a century of experience, and MasterFlow grouts have a proven track record. Respected for consistent, reliable performance, backed by the support of a global network of Master Builders Solutions experts, MasterFlow grouts are specified on power and industrial projects throughout the world.

Cementitious grouts

Master Builders Solutions supports equipment all over the world with MasterFlow cementitious mineral and metallic aggregate grouts. Different products within the range allow for reliable, non-shrink performance at consistencies of fluid, flowable, plastic or dry pack.

Master Builders Solutions Cementitious Grouts provide:
- Extended working time
- Wide temperature range
- High strength
- Fluid consistency for easy placement
- Harden free of bleeding, segregation, or settlement shrinkage

Epoxy grouts

MasterFlow epoxy grouts are three component grouts consisting of a two-part resin and high performance blended aggregate. Different products within the range provide solutions for traditional, high flow, anchor bolt, chock grouting and repair applications.

Master Builders Solutions Epoxy Grouts provide:
- High early and ultimate strength
- Resistance to dynamic and vibrational loads
- Good chemical resistance
- Bond to steel and concrete
- Excellent bearing area for even distribution of loads

Waterproofing to maintain water quality and reduce water loss

Master Builders Solutions offers waterproofing solutions for complex industrial structures. From the foundations to the roof, under chemical attack or in the storage silos, reservoirs and recirculation systems, Master Builders Solutions products have proven reliability on projects around the world.

Solutions for

Process water storage and structures

The waterproofing of silos, tanks, basins and reservoirs which store water for critical plant operations is necessary to maintain water quality, ensure water availability and avoid water loss by leakages or other construction damages. The aggressive environments found in many power production and industrial manufacturing facilities can over time damage the concrete walls and floors. The Master Builders Solutions offer includes a range of resin-based waterproofing membranes, as well as complementary joint sealants, to improve durability and extend the service life of the facility.

Secondary containment

Environmentally hazardous chemicals and liquids are frequently an indispensable part of the production process. Master Builders Solutions understands the critical nature of secondary containment and offers high performance solutions for waterproofing of concrete used in these applications. Highly efficient and effective elastomeric membranes provide the desired protection properties, while also ensuring chemical resistance and superior durability.

MasterSeal

The MasterSeal product family for waterproofing includes polymer-modified, polyurea, polyurethane, epoxy and cementitious membrane solutions. With benefits such as spray or hand application, quick cure for reduced downtime, crack-bridging properties, high elasticity and resistance to abrasion, these products improve the durability and service life of water storage structures. MasterSeal sealants are used to ensure complete protection on surface and internally sealed joints; even in areas with high chemical resistance requirements.

Industrial flooring to provide durable, cost-effective and safe solutions

Materials and processes used in power generation and industrial facilities create a number of challenges for flooring. Applications such as wet process areas, tanker loading bays, and secondary containment have requirements for broad spectrum resistance to acids, alkalis, oils, and solvents. Anti-static properties are necessary in areas of organic powders or gases where there is risk of explosions. And the ability to withstand high impact, abrasion and elevated temperatures is common.

Flooring solutions for industrial plants

**Ucrete**

Ucrete uses unique polyurethane resin technology that gives floors exceptional resistance to aggressive chemicals, extreme mechanical and thermal shock, providing a long-term, durable flooring solution.

**MasterTop**

The MasterTop product family is a group of versatile dry shake, cementitious, epoxy and polyurethane-based flooring systems that are suitable for industrial uses in a diverse range of applications.

Admixtures solutions to improve workability and enhance durability of reinforced concrete

The Master Builders Solutions brand offers the widest range of admixtures available from a single source to improve concrete durability and contribute to a longer service life for structures and infrastructure. Increased concrete productivity, workability and performance are achieved by utilizing the latest Master Builders Solutions technologies.

Solutions for

Enhanced placement

**MasterEase**
High-range water-reducing admixture for superior rheology and rheology retention

**MasterGlenium**
High-range water-reducing admixture for applications where slump retention, high early strengths and durability are required and for use in hot and cold climates.

**MasterPolyheed**
Non-chloride mid-range water-reducing admixtures formulated for superior workability and finishing.

**MasterSure**
Workability-retaining admixtures featuring a new generation of polymers that provide slump retention in concrete without affecting setting times or early strength development.

Improved performance and durability

**MasterSet**
Accelerating admixtures modify the setting time of concrete according to specific project needs, and hydration control products offer stabilization where concrete will be hauled long distances.

**MasterLife**
Durability-enhancing admixtures provide resistance to deterioration caused by abrasion, corrosion of steel, alkali silica reaction, sulfate attack, and drying shrinkage cracking.

**MasterFiber**
Fiber products introduce crack control and extend the service life of concrete.

**Green Sense Concrete**
A concrete designed by Master Builders Solutions that has been quantified by third parties to show a reduction in environmental impact, while still meeting the engineering requirements of the project.

**Smart Dynamic Concrete**
Concrete which has been designed to have self-compacting properties based upon MasterMatrix admixtures.

**Master X-Seed**
A unique crystal seed hardening system that improves the concrete strength development even at temperatures as low as -20°C / 5° F.
