MasterEmaco® T 545

Rapid setting trafficable repair mortar

**DESCRIPTION**

MasterEmaco T 545 is a one component concrete repair and anchoring material which sets in 15 minutes and will accommodate rubber-tyre traffic 45 minutes after placement. This product bonds to both concrete and masonry and can be used indoors and outdoors for highway and heavy industrial repair jobs.

**RECOMMENDED USES**

- Bridge deck and highway overlays
- Concrete pavement joint repairs
- Airport runway light installations
- Full depth structural repairs
- Expansion device nosings
- Anchoring steel bridge and balcony railings
- Commercial freezer room repairs
- Loading dock repairs
- Parking deck and ramp repairs
- Heavy industrial repairs

**FEATURES AND BENEFITS**

- **Wide temperature application range** – suitable for climates from very hot to very cold.
- **Rapid strength gain** – fast return to service only 45 minutes.
- **Chemically bonds to concrete** – long life of patches in trafficked areas.
- **Thermal expansion/contraction rate similar to concrete** – suitable for freeze thaw conditions.
- **Minimal drying shrinkage** - long term volume stability and stability of patch
- **Cement colour** - patches have texture and look of concrete.

The performance data is typical and based upon controlled laboratory conditions. Actual performance on the job site may vary from these values based on actual site conditions.

**APPLICATION**

**Surface Preparation**

Surfaces should be structurally sound, clean, and free from loose particles, oil, grease, cement laitance, mould release agents, curing membranes, and other contaminants must be removed by wet grit blasting, high pressure water jetting (approx. 150 bars) or such other effective methods. A surface profile of CSP 5 or greater is desired.

Surface carbonation inhibits chemical bond. Apply an indicator to the prepared surface to determine if carbonation is present.

To obtain permanent repairs the edge of the patch should be square cut to a depth of not less than 10mm.
Mixing Instructions
Add all the water to a clean bucket and add the MasterEmaco T 545 and mix for approximately 1 to 1½ minutes and place. Use neat material for patches less than 25mm in depth. Do not use MasterEmaco T 545 for patches less than 13mm deep. For deeper patches, MasterEmaco T 545 must be extended by adding up to 12kg of properly graded, dust-free, hard, rounded aggregate. Do not use calcareous aggregate made from soft limestone. Test aggregate for fizzing with 10% HCl. If fizzing occurs, aggregate is unsuitable for use with MasterEmaco T 545. Do not add sand, fine aggregate or Portland cement to MasterEmaco T 545. MasterEmaco T 545 gives off ammonia fumes when mixed with water and care should be taken to provide adequate ventilation. MasterEmaco T 545 is slightly acidic once mixed with water and will mark aluminium, galvanized metals and glass so care should be taken to avoid contact. MasterEmaco T 545 will not freeze at temperatures above -7°C.

ESTIMATING DATA
Note: WATER CONTENT IS CRITICAL.
A 20kg bag of MasterEmaco T 545 mixed with a maximum 1.4 litres of water produces a volume of approximately 0.01m³(10L).

A 60% extension (12kg/bag) using 14mm, rounded, sound aggregate produces a volume of approximately 0.014m³(14L)

CURING
MasterEmaco T 545 should air dry for proper cure. In hot and dry conditions prevention of moisture loss should be done by covering with plastic sheeting. Never wet cure MasterEmaco T 545.

CLEANING
Clean tools and equipment with water, before the MasterEmaco T 545 hardens.

PACKAGING
MasterEmaco T 545 is packaged in 20kg moisture resistant bags.

SHELF LIFE
MasterEmaco T 545 has a shelf life of 12 months. Store out of direct sunlight, clear of the ground on pallets protected from rainfall.

PRECAUTIONS
For the full health and safety hazard information and how to safely handle and use this product, please make sure that you obtain a copy of the BASF Safety Data Sheet (SDS) from office or website.
