## MasterTop 1080

Castle Hill Holden's car showroom spare parts store and external vehicle display area

### The Background:

Castle Hill Holden dealership is one of Sydney's most modern and well appointed. Together with its extensive showroom, sales and administration offices, spare parts store and external vehicle display area, the dealership's state-of-the-art workshop features the latest in diagnostic and service equipment.

### The Challenge:

In large car dealerships, the workshop is essentially a 'second showroom' - it really reflects the overall quality of the business. Selecting the wrong floor can prove to be extremely costly – both in the short and long-term. Choosing the right floor is about so much more than just having a good looking floor. Vehicle workshop floors need to be resistant to chemicals and spills (including hydrocarbons), highly trafficable, and hard wearing enough to withstand the daily rigors of a tough workshop environment, while at the same time being easy to clean and maintain so they stay safe and looking good in the long-term.

### Our Solution:

In keeping with their focus on maximizing quality, safety and aesthetics across the entire site, Prime Constructions specified the use of MasterTop 1080 from Master Builders Solutions for the workshop floors and walls. Based on a high solid, two component epoxy resin system, MasterTop 1080 provides excellent resistance to both chemical and mechanical damage, making it ideal for use in a wide range of facilities, including workshops, warehouses and carparks, and for floors in production facilities and processing plants.

### Project:

Castle Hill Holden

### Location:

Castle Hill, New South Wales

### Project completed:

2012

### Applicator / Contractor:

Lewis Concrete Solutions

### Products used:

MasterTop 1080
