

# MasterFinish<sup>®</sup> 380

Surface retarder for exposed aggregate concrete

Easy to see when applied to dark or light concrete

MasterFinish 380 from Master Builders Solutions has been re-formulated with a high-visibility yellow pigment dye, making it easy to see when sprayed onto any colour of freshly placed concrete – including mixes containing black oxide pigment.

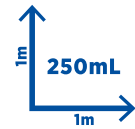

MasterFinish 380 set retarder is economical and extremely easy to use. Once the free water has evaporated from the surface of the freshly placed concrete, spray-apply MasterFinish 380 at the rate of 250mls per square metre. The non-staining yellow dye clearly shows which areas have been sprayed, helping to ensure you achieve full and even coverage, every time.

High visibility dye ensures full coverage

Easy to use, simple spray application

Economical in use, 250mL per square metre

Controlled retardation of surface concrete

Consistent, high-quality exposed aggregate finish

Non-staining & Water-based for an easy clean up
