

Project:

The Acquedotto Pugliese water treatment plant in Mola di Bari

Location:

Mola di Bari (BA), (Italy)

Project completed:

2018

Owner/s:

Acquedotto Pugliese

Applicator/Contractor:

Impresa Gentile Leonardo srl di Locorotondo (BA)

Market sector:

Water Management Industry

Products used & quantities:

MasterSeal 7000 CR

MasterEmaco S 498 FR

MasterEmaco N 405 FC

MasterProtect 310

MasterProtect 320

WASTE WATER TREATMENT PLANT MOLA DI BARI

Refurbishment of sedimentation tanks

Our reference at Mola di Bari (Italy)

The background

The water supplier Acquedotto Pugliese carried out an upgrade of the sewer lines of Mola di Bari, a suburb of Bari with 25,000 inhabitants.

The project involved stretches of sewer lines and their connections to users with the aim of upgrading the system in order to better meet the newly evolved local needs, providing an increasingly efficient service.

From a purely technical point of view, the work involved the replacement of 7.5 km of pipes; the creation of 1,578 new connections; the construction of 93 new manholes plus the rehab of 182 others and the substitution of 349 manhole covers. Furthermore, 66,000 square meters of paved roads were improved during the work.

The challenge

The condition of the sedimentation tanks required complete refurbishment of sedimentation tanks, including structural and cosmetic concrete repair and waterproofing with membranes chemically resistant against the corrosive substances that could be found in the tanks.

Additionally, considering the proximity to the sea of the whole installation, external concrete repair and protection against potential chloride corrosion had to be considered.

WASTE WATER TREATMENT PLANT MOLA DI BARI

Refurbishment of sedimentation tanks

Application of MasterSeal M 689 polyurea waterproofing and protection membrane.

Our solution

Internal works:

- Sandblasting of reinforced concrete surfaces
- Local repairs with MasterEmaco S 498 FR
- General levelling with MasterEmaco N 405 FC
- Priming using Xolutec technology with MasterSeal 770
- Chemical resistant waterproofing using Xolutec technology with MasterSeal 790

External works:

- Sandblasting of reinforced concrete surfaces
- Local repairs with MasterEmaco S 498 FR
- General levelling with MasterEmaco N 405 FC
- Priming with MasterProtect 310
- Colored protective coating with MasterProtect 320.

Benefits to the customer

The innovative MasterSeal 7000 CR system based on Xolutec technology ensures the optimal chemical resistance and offers a high degree of elasticity (as opposed to traditional alternative systems).

Project facts at a glance

- Complete refurbishment and protection treatment, both inside and outside of the tank.
- High mechanical and chemical resistance combined with high elasticity and crack bridging.
- Approx. 800 m² of treated surface.

Master Builders Solutions from BASF

The Master Builders Solutions brand expresses BASF's expertise in providing customized chemical solutions for new construction, maintenance, repair and restoration of structures.

Master Builders Solutions is built on the experience gained from more than a century in the construction industry. At the core of the Master Builders Solutions brand is the combined know-how and experience of a global community of BASF construction experts, who connect with you to solve all of your construction challenges.
