

Accepted Acrowall-CP Systems Lath and Trim Accessories

LATH

Wire fabric lath:

1. Minimum No. 20 gauge, 25.4 mm (1") galvanized steel, woven wire fabric is required. Other laths shall comply with ASTM C933-80 (welded) and ASTM C1032-86 (woven). The lath is self-furred or furred when applied over all substrates except unbacked polystyrene. Self-furring lath shall be used in accordance with the following requirements:
2. Wire or lath shall be applied with minimum 25 mm (1") end laps and side laps.
3. Furring crimps shall occur at maximum 152.4 mm (6") intervals each way. Furring crimps shall provide a minimum 3 mm (1/8") clearance from the substrate after installation.

Metal lath:

1. The lath shall comply with ASTM C847-93 requirements. Furring and self furring requirements shall be as set forth for wire fabric lath. Minimum weight is 1.36 kg/m² (2.5 lb/yd²).
2. The metal lath shall be applied with minimum 13 mm (1/2") side laps and 25 mm (1") end laps.
3. When end laps occur between supports, lace or wire tie the ends of the sheets with 1.2 mm (0.0475") galvanized annealed steel wire.
4. Refer to ASTM C1063 for additional information.

GENERAL LATH & TRIM NOTES

1. See current Acrowall-CP Specifications, details, and Product Bulletins for application of ACROCRETE STUCCOBASE™.
2. See current Acceptable Sealants for Use with Acrocrete Wall Systems Technical Bulletin for sealant information.
3. The maximum deflection criteria for ACROCRETE STUCCOBASE is L/360. Placement and design of expansion joints shall be the responsibility of the project architect/engineer.
4. Selection of the type of trim accessory materials is the responsibility of the design professional.
5. Refer to NER-676 or ESR-1064 for additional information.

TRIM MANUFACTURERS

Casing beads, corner beads, expansion joints and weep screed must comply with ASTM D1784 for vinyl, ASTM A525 or A526 for galvanized and ASTM B69 for zinc.

TRIM JUNCTION RECOMMENDATIONS

1. When two pieces of trim abut:
 - A. Set intersection of trim in a minimum 100 mm (4") bed of low modulus trim sealant.
 - B. Allow 3–5 mm (1/8"–3/16") gap between the abutting trim pieces. Do not overlap trim.
 - C. Attach the trim in accordance with manufacturer's specifications. True expansion joints must be fastened to the structural substrate.
2. When two or more pieces of trim intersect:
 - A. The vertical trim piece shall be continuous with all horizontal pieces.

- B. Miter all corners at intersections of trim.
- C. Set intersection of trim in a minimum 101 mm (4") bed of low modulus trim sealant.
- D. Allow 3–5 mm (1/8"–3/16") gap between the intersecting trim pieces. Do not overlap the trim.
- E. Attach the trim in accordance with manufacturers' specifications. True expansion joints must be fastened to the structural substrate.

EXPANSION/CONTROL JOINT PLACEMENT

Expansion/control joints are needed in thick, Portland cement-based plaster products such as ACROCRETE STUCCOBASE, to minimize potential cracking caused by stresses such as initial shrinkage, and thermal expansion and contraction. Guidelines for the placement of the joints are as follows:

1. Every 13.4 m² (144 ft²) of wall surface area with maximum uncontrolled length or width of 5.5 lineal meters (18 lineal feet) and a maximum uncontrolled length-to-width ratio of 2 1/2:1.
2. At dissimilar substrates, an expansion joint must be used. If building expansion/contraction is anticipated, a true expansion joint will be necessary.
3. At door and window bucks, and at large wall penetrations or openings.

TYPICAL USES OF TRIM ACCESSORIES

1. Building corners: zinc, galvanized wire or vinyl corner bead.
2. Window, door heads, jambs, A/C units, etc.: zinc, galvanized wire short flanged reinforcement or vinyl casing bead.
3. Drip or aesthetic joints, window or door bucks, and at large penetrations in the wall (A/C units, etc.): zinc, galvanized or vinyl expansion joints.
4. Substrate change: zinc expansion joint or panel/expansion joint.
5. Panel or true expansion joints: zinc, galvanized or vinyl expansion joint or back-to-back casing beads or zinc corner beads or back-to-back wire reinforcement corner bead.
6. Expansion/control joint.

TECHNICAL SUPPORT

Consult BASF Wall Systems' Technical Services Department at 800-589-1336 for specific recommendations concerning all other applications. Consult the Acrocrete® website, www.acrocrete.basf.com, for additional information about products and systems and for updated literature.

Note

BASF Wall Systems is an operating unit of BASF Construction Chemicals, LLC. (herein after referred to as "BASF Wall Systems")

Residential Policy

Apply walls systems in accordance with local building codes in force at the time of construction. On one and two-family residential framed construction, BASF Wall Systems requires that the wall system selected be one that includes provisions for moisture drainage. Please view the Acrocrete Residential Policy Bulletin on the Acrocrete website for a more detailed discussion of this topic.
