MasterBrace® 6061UW

Marine epoxy paste for the MasterBrace 6000UW (Advanced Pile Encapsulation) System

FORMERLY HYDROCOTE 3061I

DESCRIPTION

MasterBrace 6061UW two component, epoxy paste adhesive is designed to be applied to surfaces as an adhesive below the waterline.

PRODUCT HIGHLIGHTS

- Marine grade adhesive Will adhere to wood, concrete or steel, above or below water line
- Excellent handling Can be glove applied, hand troweled or pumped
- Suitable for low temperature application Cures down to 40 °F (4 °C)

APPLICATIONS

- Primarily for sealing seams in FRP jackets and forms (Used with MasterBrace encapsulation systems as seam and gasket adhesive)
- Can also be used for:
  - Bonding and anchoring to concrete, steel and other rigid materials
  - Surface seal for crack injection
  - Piers
  - Bridges
  - Offshore structures
  - Dams
  - Sea walls

PACKAGING

MasterBrace 6061UW epoxy paste adhesive is packaged in 2 gal (7.6 L) units

COLOR

Grey

SHELF LIFE

18 months when properly stored

STORAGE

Store in unopened containers in a clean, dry area between 50 and 90 °F (10 to 32 °C) away from direct sunlight, flame, or other hazards.

HOW TO APPLY

SURFACE PREPARATION

Concrete Surfaces

1. New concrete must be fully cured (28 days minimum) before application of MasterBrace 6061UW epoxy paste adhesive. The substrate must be clean and sound.
2. Remove all marine growth, paint, grease, oil or other contaminants by sandblasting, waterblasting or rotary abrading. Create an anchor profile, if possible.

Steel Surfaces

1. Steel surfaces must be cleaned to meet SSPC-SP6-63, “No. 6 Commercial Blast Cleaning.”

Wood Surfaces

1. Remove all marine growth, paint, grease, oil and other contaminants by sandblasting, waterblasting or rotary abrading. Remove unsound wood.

SUBSTRATES

- Concrete
- Steel
- Timber

NOTES:
Results were obtained when material was mixed and cured at 73 °F (22 °C). Reasonable variations can be expected depending on application methods, test methods and curing conditions.

MIXING

HAND MIXING
1. Mix only the amount of paste that can be placed within the specified pot life. (Higher temperatures shorten pot life).
2. Place equal parts of A and B on a flat, disposable palette (i.e. sheet of cardboard) and mix with a flat bladed scraper or trowel. Mix until all evidence of the original white and black colors have disappeared and a uniform gray color is achieved.
3. Mixed paste may be placed into disposable cartridges for use with hand or powered caulking tools.

MECHANICAL MIXING
1. If plural component equipment is used to mix and place MasterBrace 6061UW epoxy paste adhesive, place equal amounts of A and B in the appropriate hoppers of the equipment.
2. If placement is delayed for periods greater than 10 minutes, purge the static mixer or replace the mixer element, if necessary.

APPLICATION
1. When applied to surface under the waterline, it is necessary to “work” the paste on to the surface, being careful not to entrap water between the paste and the surface.
2. When used to cover cracks, work paste into one end of crack and progress along crack to other end, displacing water from the crack. Smooth outer surface with glove or trowel.
3. When used to anchor embedded items, spread evenly over surface of embedded item and inject additional paste into cavity. Using caulking tool or plural component equipment with sufficient nozzle length to reach base of cavity.
4. Push embedded item into cavity, displacing any water or air in surface of paste with glove or trowel. 5. If outer surface is vertical, it may be necessary to provide a temporary dam of plumber’s putty or other support, to prevent the paste from sagging.

SUPPORTED PASTE
1. MasterBrace 6061UW epoxy paste adhesive may be applied to surfaces under the waterline, using a fabric support.
2. The paste is spread onto glass fiber mat or mesh to provide a film thickness of 1/8 to 1/4 inch (3 mm to 6 mm). The coated fabric is worked against the surface, with care taken to prevent entrapment of water or air bubbles between the surface and the fabric.
3. Some of the paste must be forced through the fabric to thoroughly embed the fabric.
4. Additional paste may be applied to the outside of the fabric, if necessary. Smooth the outside surface of the paste and feather edges with a gloved hand.

CLEAN UP
Mixed epoxy is much easier to clean up before it hardens—solvents such as acetone, methyl ethyl ketone (MEK) and toluene may be used. Commercial epoxy strippers are recommended for hardened epoxy. Consult solvent manufacturers usage recommendation.

FOR BEST PERFORMANCE
• Minimum application temperature is 40 °F (4 °C).
• To obtain maximum bond strength, local water conditions have to be taken into account and appropriate surface preparation procedures have to be followed. For further information, contact your BASF Representative.
• Make certain the most current versions of product data sheet and SDS are being used; call Customer Service (1-800-433-9517) to verify the most current version.
• Proper application is the responsibility of the user. Field visits by BASF personnel are for the purpose of making technical recommendations only and are not for supervising or providing quality control on jobsite.

HEALTH, SAFETY AND ENVIRONMENTAL
Health, Safety and Environmental Read, understand and follow all Safety Data Sheets and product label information for this product prior to use. The SDS can be obtained by visiting www.master-builders-solutions.basf.us, e-mailing your request to basfbsccst@basf.com or calling 1(800)433-9517. Use only as directed. For medical emergencies only, call ChemTrec® 1(800)424-9300.

LIMITED WARRANTY NOTICE
Every reasonable effort is made to apply BASF exacting standards both in the manufacture of our products and in the information which we issue concerning these products and their use. We warrant our products to be of good quality and will replace or, at our election, refund the purchase price of any products proved defective. Satisfactory results depend not only upon quality products, but also upon many factors beyond our control. Therefore, except for such replacement or refund, BASF MAKES NO WARRANTY OR GUARANTEE, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY, RESPECTING ITS PRODUCTS, and BASF shall have no other liability with respect thereto. Any claim regarding product defect must be received in writing within one (1) year from the date of shipment. No claim will be considered without such written notice or after the specified time interval. User shall determine the suitability of the products for the intended use and assume all risks and liability in connection therewith. Any authorized change in the printed recommendations concerning the use of our products must bear the signature of the BASF Technical Manager.

This information and all further technical advice are based on BASF’s present knowledge and experience. However, BASF assumes no liability for providing such information and advice including the extent to which such information and advice relate to existing third party intellectual property rights, especially patent rights. In particular, BASF disclaims all CONDITIONS AND WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING THE IMPLIED WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY. BASF SHALL NOT BE RESPONSIBLE FOR CONSEQUENTIAL, INDIRECT OR INCIDENTAL DAMAGES (INCLUDING LOSS OF PROFITS) OF ANY KIND. BASF reserves the right to make any changes according to technological progress or further developments. It is the customer’s responsibility and obligation to carefully inspect and test any incoming goods.
