# METALLIC EFFECTS

*Stunning appearances, design freedom,  
thermal efficiency, moisture protection, and  
fire performance are some of the reasons  
Metallic Effects offer More than Metal™*

*On the cover:*

**Vee Quiva Hotel & Casino** - Phoenix, AZ  
*Metallic Effects New Penny & Fort Knox*

The projecting canopies at the entry of this vibrant resort were created by combining two Metallic Effects colors, New Penny and Fort Knox. The end result is a burnished copper look that references the streaky, variegated colors of South Mountain's rolling hills.

## Sparkling Appearances

Finestone Metallic Effects bring dazzling metallic appearances together with the versatility and efficiency of Finestone CI Wall Systems.

Metallic Top Coat can be applied over Leveling Skimcoat to create a smooth metallic surface. This combination creates the highest quality metallic appearances.

Metallic Top Coat can also be applied directly to Finestone textured finishes, to create visual accents and to refresh the appearance of an existing structure.

The 100% acrylic chemistry and carefully selected pigmentation systems used in Metallic Top Coat provide extended fade resistance for durable long-term performance.

## Smooth and Sleek

Master Builders Solutions formulated Leveling Skimcoat specifically for use with Metallic Top Coat. Together they give plastering contractors the ability to create the smooth, sparkling appearance that makes the metallic look so popular.

Leveling Skimcoat is designed for use with the Finestone Pebbletex CI-DCA Wall System, Platinum CI Stucco Ultra, and Finestone FinePanel CI prefabricated panels. Please see the respective system literature for more information.

# The Look You Want

Metallic Effects can be smooth and flat, with a look that replicates metal panels. Unlike metal, complex shapes can be created, like the 3D bumpouts shown to the right. With Metallic Effects, you can extend the metallic look to complex, one-of-a-kind shapes not easily fabricated from metal.

**One Daytona** - Daytona, FL  
*Metallic Effects Pewter*

# More than Metal™

**Promenade Center** - Scottsdale, AZ  
*Metallic Effects Patinaed Green*

The patinaed copper metallic effect featuring Metallic Effects Patina Green at the cantilevered overhangs of the four-story office building provides a dramatic highlight to the Frank Lloyd Wright inspired design.

The building enclosure performs many key functions in addition to providing a fantastic appearance. Heat, air, and moisture need to be managed. Fire performance must meet building code requirements. The building enclosure requires architectural details that are constructible and consistent with testing that demonstrates code compliance.

Metallic Effects work seamlessly with proven Finestone wall systems. They provide the look that building owners want, with code compliance and enclosure performance everyone needs, at a cost that facilitates project success.

Promenade Center

# Better Together

One Finestone Pebbletex CI-DCA installation crew can create metallic, stucco, brick, stone, and other visual effects. With one continuous, fluid applied Finestop air/water-resistive barrier to protect against air leakage and moisture intrusion. And a blanket of continuous, uninterrupted exterior insulation.

Hi-Impact mesh can be specified wherever extra impact resistance is needed. With Finestone Pebbletex CI-DCA, the multi-cladding look comes with higher performance at lower cost.

Courtyard Marriot - Fort Worth, TX  
*Metallic Effects Pewter*

# Safe by Design

Realizing aesthetic and building science benefits is not enough to meet the demands of the 21st century building enclosure. Safety is a critical element that needs careful consideration. While the IECC requires continuous insulation and an air barrier, the International Building Code (IBC) requires specific levels of fire performance for Type I-IV construction.

Finestone Pebbletex CI-DCA, Platinum CI Stucco Ultra, and FinePanel CI are fully engineered building enclosure systems. They are NFPA 285 compliant, as described in the Finestone NFPA 285 Compliant Wall Systems and Assemblies brochure. Compliance with the IBC is confirmed by ICC-ESR Evaluation Reports.

You can rely on Finestone architectural details – they are fully consistent with the testing and engineering that provide code compliance. If you have an unusual condition, the dedicated Finestone Engineering and Technical Application staff is there to help.
