CHEMICAL RESISTANCE

In accordance with ASTM D 1308, MasterTop 1234 with the standard MasterTop GP 500 finish coat will withstand exposure for up to 7 days at 70° F (22° C) for the following chemicals.

- Dilute mineral acids, including hydrochloric (< 30%), phosphoric (< 20%), and sulfuric (< 30%)
- Alkalis, including potassium hydroxide to a 50% concentration
- Some dilute organic acids such as acetic (30%), formic, citric, and uric
- Fats, oils, and sugars
- Mineral oils, diesel fuel, kerosene, and gasoline
- Some organic solvents, including aliphatic hydrocarbons

Full chemical resistance is achieved after curing for 7 days. For resistance to a specific chemical compound, consult the Master Builders Solutions Chemical Resistance Guide.

HOW TO APPLY

SURFACE PREPARATION

1. Floors must be structurally sound and fully cured a minimum of 28 days. Test floor for vapor drive in accordance with ASTM D 4263, ASTM F 2170 or ASTM F 2420.
2. Repair concrete as necessary.
3. Use a commercial degreaser to clean floors of oil, grease and other bond-inhibiting materials.
4. Remove curing and parting compounds and other surface hardeners and floor coatings in accordance with the manufacturer's instructions.
5. Mechanical surface profiling is the method of surface preparation for both new and existing floors. Mechanically profile the floor to CSP 3 (approximating medium-grit sandpaper) as described by the International Concrete Repair Institute. Do not use acid etching for surface preparation. Do not use any method that will fracture the concrete.
6. Apply a 25 ft² (2.35 m²) test in an inconspicuous area that meets the owner's expectations for appearance, slip resistance and performance.

MIXING

1. Mix the components for this product in the following ratios:

TYPICAL PROPERTIES

APPLICATION COMPONENTS	MIX RATIO BY VOLUME
Primer MasterTop GP 500 Part A / Part B	2 to 1
Receiving Coat MasterTop GP 500 Part A / Part B Broadcast Aggregate	2 to 1
Grout Coat MasterTop GP 500 Part A / Part B	2 to 1
Optional Top Coat MasterTop GP 500 Part A / Part B or MasterTop TC 493 Part A / Part B or MasterTop TC 693 Part A / Part B	2 to 1 3 to 1 1 to 1

2. Properly mix each component separately before mixing together to ensure a uniform consistency.
3. Combine Parts A and B in a suitably sized container. Use the proper ratios of A and B; scrape the sides of the containers to ensure a complete reaction.
4. Mix properly for 3 minutes with a slow-speed drill and Jiffy-style mixing paddle at 350 rpms. Keep the paddle below the surface to avoid entrapping air. Do not mix by hand.

APPLICATION

1. Install the cove base as required.
2. Apply primer coat of epoxy resin at approximately 200 ft²/gallon (3.75 m²/L).
3. Apply the receiving coat of epoxy at approximately 36 ft²/gallon (2.5 m²/L).
4. Broadcast the MasterTop DE 41CQ colored aggregate by hand or by mechanical blower into the wet receiving coat. Broadcast to refusal. Make certain the entire floor is saturated with aggregate, exhibiting a dry appearance.
5. Allow to cure. Once cured, sweep, stone, and vacuum the excess aggregate.
6. Apply the clear grout coat at 80–100 ft²/gallon (2–2.5 m²/L) by squeegee. Lightly back-roll with a thick-nap roller. Allow to cure at least 8–10 hours.
7. Apply the optional clear finish coat at 250–300 ft²/gallon (6.25–7.5 m²/L) to achieve the desired texture or smoothness. For increased abrasion resistance and UV stability, substitute MasterTop TC 493 or MasterTop TC 693 for the finish coat.
8. Various curing agents can be used to achieve desired application properties; refer to the MasterTop GP 500 product

MAINTENANCE

Regular cleaning and maintenance will prolong the life of all polymer flooring systems, enhance their appearance, and reduce any tendency to retain dirt. Refer to the MasterTop Cleaning and Maintenance Guide for more information.
